TASK 2 | CYBERSECURITY

PHISHING AWARENESS TRAINING

Recognize suspicious messages. Verify before you click. Stay safe online.

Presented by: Aakash Sachin Pawara

01 | What is Phishing?

Phishing is a social engineering attack in which an attacker pretends to be a trusted person or organization to trick someone into sharing sensitive information or taking an unsafe action.

THE BAIT

A fake email, SMS, call, or website designed to look genuine.

THE GOAL

Steal passwords, OTPs, banking details, or personal data.

THE TRICK

Create urgency, fear, curiosity, or offer a reward.

02 | Where Can Phishing Happen?

EMAIL PHISHING

Fake bank alerts, password-reset emails, invoice attachments.

SMS / SMISHING

Delivery messages, KYC warnings, suspicious payment links.

PHONE / VISHING

A caller pretends to be bank support or an official.

FAKE WEBSITES

Look-alike login pages that imitate trusted services.

SOCIAL MEDIA

Fake profiles, giveaways, support accounts, and DMs.

03 | Recognize Phishing Emails & Fake Websites

- Sender address or domain is misspelled or unfamiliar.
- Message creates pressure: “Act now” or “Your account will be blocked.”
- Unexpected links or attachments ask you to sign in or download a file.
- Requests for passwords, OTPs, PINs, or bank details.
- Website address has spelling changes, extra words, or a misleading domain.
- Poor grammar, unusual formatting, or an offer that seems too good to be true.

04 | Social Engineering Tactics

URGENCY

“Your account will be suspended in 10 minutes.”

AUTHORITY

“I am from the bank / IT department.”

FEAR

“A suspicious transaction was detected.”

REWARD

“You have won a free gift. Claim now.”

CURIOSITY

“See this private document / photo.”

05 | Real-World Style Example (Fictional)

SUBJECT: URGENT! Your bank account will be blocked

From: support@secure-bank-example.invalid

Dear Customer,

We detected unusual activity. Verify your account immediately using the link below or your account will be suspended.

[Verify Account Now]

Regards,

Security Team

This is a training example, not a real bank message or website.

WARNING SIGNS

- Generic greeting
- Fear and urgency
- Unverified sender
- Unexpected login link
- Threat of account suspension

06 | What Should You Do?

- Pause. Do not click links or open unexpected attachments.
- Check the sender using a trusted contact method.
- Open the official app or type the known website address yourself.
- Never share passwords, PINs, or OTPs with anyone.
- Report the message to the organization or platform.
- If you entered details, change your password and contact your bank or service provider immediately.

07 | Best Practices to Stay Safe

STRONG PASSWORDS

Use unique passwords. A password manager can help.

MULTI-FACTOR AUTH

Enable MFA wherever available.

SOFTWARE UPDATES

Keep your phone, browser, and computer updated.

VERIFY FIRST

Confirm payment or account requests independently.

BACKUP & REPORT

Back up important data and report suspicious messages.

08 | Quick Knowledge Quiz

Test what you have learned. Choose the safest action for each situation.

1. You receive an unexpected message asking for your OTP. What should you do?

A. Share it quickly B. Never share it; verify through the official channel C. Forward it to friends

Correct answer: B

2. A link says your bank account will be blocked unless you log in now. What is the safest step?

A. Click immediately B. Reply with account details C. Open the official bank app or website yourself

Correct answer: C

3. A website uses HTTPS. Does that guarantee it is genuine?

A. Yes, always B. No. Check the domain and verify independently C. It means the website belongs to a bank

Correct answer: B

REMEMBER

STOP. CHECK.

VERIFY.

A few seconds of checking can protect your accounts, money, and personal information.

Thank you!
